EVX
ELECTRIC VEHICLE EXTRICATION

ELECTRIC VEHICLE TRAINING FOR EMERGENCY RESPONDERS

DETAILS
Electric Vehicle Training for Emergency Responders is a comprehensive course that covers everything that a first responder needs to know to feel confident in their approach to electric vehicle accidents. Participants will gain a full understanding of electric vehicles and the hazards that are associated with compromised high voltage systems. Topics covered include:

- Understanding basic electrical concepts and hazards
- Vehicle systems and safety features
- Initial response: Identify, Immobilize, and Disable
- Emergency Operations

LIVE DISPLAY
In addition to in-class learning, participants will receive a hands-on walk through of a Tesla Model X that has been strategically modified to identify important hidden components that emergency responders need to be aware of to safely perform extrications on all electric vehicle makes and models.

COURSE OFFERINGS
EV-X is available to provide the Electric Vehicle Training for Emergency Responders to individual departments upon request, as well as to departments who wish to host the course for multiple agencies. Contact Kevin Patterson to schedule training for your particular needs.

Kevin Patterson
kpatterson@ev-x.ca | 403-760-1240

Kevin Patterson has been an active member with the Banff Fire Department for over 15 years and specializes in vehicle extrication and training. Kevin has had the opportunity to travel to the Tesla plant in Fremont California on several occasions to work with the emergency response team to bring back vital information to emergency first responders and has cut apart over a million dollars of Tesla vehicles throughout his training.
